

# Takeshi Suzuki

**Senior Software Engineer · Full-Stack · AI · Web3 · Cloud Infrastructure**

Bolton, ON, Canada | Remote only | Canadian permanent resident | English  
[takeshisuz57@gmail.com](mailto:takeshisuz57@gmail.com) | [Portfolio](#) | [GitHub](#)

## SUMMARY

Senior Software Engineer with 7+ years of experience building full-stack applications, backend APIs, user-facing product experiences, Web3 applications, AI-powered workflows, and cloud infrastructure. Experienced in translating business requirements into production systems across frontend, backend business logic, databases, third-party integrations, CI/CD pipelines, observability, and deployment workflows.

Strong in modern AI-assisted development and AI agent engineering, including Claude Code, Codex, LangChain, LangGraph, MCP, RAG, knowledge base systems, and workflow automation. Hands-on experience across TypeScript, Python, Go, Node.js, React, Next.js, NestJS, Express.js, PostgreSQL, MySQL, MongoDB, Redis, Docker, Kubernetes, Terraform, AWS, GCP, EVM, Solidity, Solana, Rust, viem, and wagmi.

## CORE SKILLS

### AI Engineering

Claude Code, Codex, LangChain, LangGraph, MCP, RAG, AI agent development, knowledge base systems, workflow automation, AI-assisted development

### Languages & Runtimes

TypeScript, JavaScript, Python, Go, SQL, Solidity, Rust, Node.js

### Frontend & APIs

React, Next.js, HTML, CSS, responsive web design, Figma-to-UI implementation, Web3 UX, REST APIs, CRUD APIs, authentication, third-party integrations

### Backend & Data

NestJS, Express.js, Flask, Go, PostgreSQL, MySQL, MongoDB, Redis, relational database design

### Web3 / Blockchain

EVM, Solidity, Solana, Rust, DApp development, viem, wagmi, blockchain indexing, wallet-connected applications, on-chain data workflows

### Cloud & Infrastructure

AWS, GCP, Docker, Kubernetes, k3d, GitHub Actions, CI/CD pipelines, Grafana, Prometheus, Terraform, infrastructure as code, observability

## PROFESSIONAL EXPERIENCE

### **Freelance / Contract Software Engineer, *Senior Full-Stack Engineer / Contract Developer***

**Oct 2024 – Present**

- Delivered 5+ contract engagements for U.S.-based startups, nonprofits, and independent product teams across full-stack web development, SaaS-style platforms, Web3, AI-assisted development, and automation.
- Worked directly with founders, CEOs, and CTOs to define technical scope, architect MVP features, and ship launch-ready software for early-stage products.
- Built core MVP functionality for Klyro, a U.S.-based stealth startup, supporting fundraising, launch preparation, and early team growth.
- Developed Urbanmix and WideTherapy web applications for Beshi Org, including frontend features, backend services, product workflows, and third-party integrations.
- Owned implementation from product requirements through backend business logic, React/Next.js user interfaces, Node.js/NestJS/Express APIs, databases, AI-enabled workflows, cloud infrastructure, CI/CD pipelines, and deployment workflows.
- Applied AI-assisted development tools and modern automation workflows to accelerate product delivery, improve implementation quality, and support rapid iteration in startup environments.

**Tech:** TypeScript, React, Next.js, Node.js, NestJS, Express.js, Python, PostgreSQL, MySQL, MongoDB, Redis, Docker, GitHub Actions, AWS, GCP, LangChain, LangGraph, RAG, MCP

### **Webisoft, *Senior Full-Stack Engineer, Web3 / DApp Development***

**May 2023 – Oct 2024**

- Contributed to DApp development for Web3 products and DeFi ecosystems, including Gains Network / GNS, Velodrome, and Uniswap V2 fork-based applications.
- Integrated wallet-connected application flows and smart contract interactions using viem and wagmi on EVM-compatible networks.
- Developed Web3 UX flows that connected user-facing interfaces with on-chain data, wallet state, smart contract activity, and product workflows.
- Built blockchain indexer functionality to surface on-chain data in frontend applications and support data-driven user experiences.
- Collaborated with distributed product and engineering teams to deliver DeFi application features across frontend, backend, blockchain data, deployment, and infrastructure layers.
- Strengthened practical expertise in DApp architecture, EVM ecosystems, blockchain indexing, DeFi application patterns, and Web3 frontend integration.

**Tech:** TypeScript, React, Next.js, Node.js, EVM, Solidity, viem, wagmi, Web3 UX, blockchain indexing, Docker, GitHub Actions, AWS, GCP

## **Webisoft, *Full-Stack Engineer, SaaS / Automation Products***

**May 2022 – Apr 2023**

- Developed features for GetBonzo, an SMS marketing platform, and LeadAction, an SMS and email automation tool.
- Implemented 100+ backend feature endpoints and APIs supporting product workflows, automation logic, user management, integrations, and application data operations.
- Built 20+ custom UI components and 17+ application pages from product requirements and design specifications.
- Delivered end-to-end product features across frontend user experiences, backend business logic, database workflows, third-party integrations, infrastructure, and client-facing functionality.
- Supported CI/CD, containerized development, monitoring, and cloud deployment workflows using GitHub Actions, Docker, Kubernetes/k3d, Grafana, Prometheus, AWS, GCP, and Terraform.
- Worked remotely from Japan with a Canada-based team, coordinating across time zones and distributed project stakeholders.

**Tech:** TypeScript, React, Node.js, Express.js, NestJS, PostgreSQL, MySQL, MongoDB, Redis, GitHub Actions, Docker, Kubernetes, k3d, Grafana, Prometheus, AWS, GCP, Terraform

## **Innovature.ai, *Senior Full-Stack Engineer***

**May 2020 – May 2022**

- Advanced into a senior full-stack role, owning feature development across user-facing interfaces, backend business logic, APIs, database-backed workflows, and production infrastructure.
- Built and maintained CRUD REST API endpoints using Express.js, TypeScript, and MySQL.
- Connected frontend applications with backend services and relational database models to deliver complete product features.
- Debugged frontend and backend issues, improved existing code, and contributed to ongoing product stability and maintainability.
- Collaborated with designers, engineers, and stakeholders to translate product requirements into functional, maintainable application features.
- Gained hands-on experience with deployment workflows, CI/CD practices, cloud infrastructure, containerized services, and production monitoring in full-stack application environments.

**Tech:** TypeScript, JavaScript, React, Node.js, Express.js, MySQL, REST APIs, Docker, CI/CD, cloud infrastructure

## **Innovature.ai, *Frontend Engineer***

**Nov 2018 – May 2020**

- Specialized in frontend development, building production pages and reusable UI components from Figma designs using TypeScript.
- Implemented assigned product features and bug fixes through ticket-based Agile workflows.
- Translated design specifications into responsive, user-facing application interfaces.
- Collaborated with designers and senior engineers to improve UI consistency, usability, and frontend implementation quality.

**Tech:** TypeScript, JavaScript, React, HTML, CSS, Figma, responsive UI, component development

## **Innovature.ai, *Junior Software Engineer***

**Feb 2018 – Nov 2018**

- Joined the company as a junior software engineer and contributed to assigned frontend and backend development tasks.
- Completed tickets across feature development, bug fixing, and application maintenance.
- Gained hands-on experience with TypeScript, Express.js, MySQL, frontend implementation, and REST API development.
- Worked closely with senior engineers to learn production engineering practices, code review workflows, and full-stack application development.

**Tech:** TypeScript, JavaScript, Express.js, MySQL, REST APIs, Git, Agile development

## **PROJECTS & EXTRA WORK**

Outside of professional roles, actively builds personal software projects and contributes to open-source initiatives to deepen experience in AI agents, Web3, automation, full-stack product development, and collaborative engineering.

- Contributed to Biblionexus Foundation as an open-source full-stack developer, supporting research and development of a crowdsourcing Bible translation solution.
- Built personal projects including a copy-trading automation bot, exploring trading APIs, automation workflows, and reliability considerations.
- Additional selected projects: <https://takeshi-suzuki.vercel.app/projects>

## **EDUCATION**

### **Osaka City University, *Bachelor's Degree in Computer Science***

**Apr 2014 – Mar 2017**

**Field of study:** Computer Science
